## SUMMARY

I am a responsible and adaptable professional, committed to taking on challenges and fulfilling my duties effectively. I thrive on learning continuously and aim to create meaningful improvements in services that benefit people. My goal is to leverage my skills to contribute positively to the world around me.

---

## EDUCATION

### Bachelor of Engineering in Information Technology

Metropolia University of Applied Sciences • Helsinki, Finland • 2025 • 4.75

- Major in Software Engineering
- 157 passed credits

---

## SKILLS

**Programming:** Javascript(React, Next Js , Express Js), CSS(Chakra UI), Java, Kotlin, Python, Database(MongoDB, Prisma)

**CI / CD:** Docker, Jenkins

**Network Management:** MCSA, MCSE, CCNA, Kerio Firewall Management

---

## EXPERIENCE

### Software Developer Trainee

Skanio

October 2024 - Present, Turku, Finland

- Developing and enhancing UI/UX features using React.js.
- Managing and Deploying application components with Docker.
- Leveraging Amazon Web Services (AWS) for cloud infrastructure and scalability.
- Conducting code reviews and optimizing components for better performance and usability.

### Network Administrator

Exir Pouyan

February 2019 - September 2021, Arak, Iran

- Deployed servers and virtual machines based on company policies.
- Managed segmented computer networks using Cisco connectivity devices.
- Configured firewalls and security protocols to ensure safe data transmission across networks.

### Helpdesk Network Assistance

Hoorakhsh Studios

August 2018 - February 2019, Tehran, Iran

- Maintained operating systems and various software.
- Handled issues related to computer hardware.
- Provided user support for software installation and troubleshooting.

---

## PROJECTS

### Game Hub

Personal Intrest • [game-hub-nine-olive.vercel.app/](https://game-hub-nine-olive.vercel.app/) • August 2024 - September 2024

- A single-page application (SPA) including the Rawg API to provide users with a comprehensive list of games with sorting functionality.
- **Frontend:** React, TypeScript: React facilitates scalable and component-based development, while TypeScript ensures type safety, leading to a robust and error-resistant codebase that supports a modern front-end architecture.
- **API:** Rawg API: Leveraging the Rawg API accelerates access to a vast game database, enabling the delivery of rich content without local data maintenance, thus optimizing focus on feature development and user experience enhancement.

### Earth

Metropolia University of Applied Sciences • [github.com/amirghari/Event\\_Manager](https://github.com/amirghari/Event_Manager) • January 2024 - March 2024

- As the fullstack developer, I built this platform to enhance user engagement by providing a convenient way to organize, discover, and join outdoor activities, fostering a community-driven environment that encourages adventure and active living.
  - **Frontend:** React, styled using Chakra UI: Chakra UI ensures consistent and visually appealing user interfaces.
  - **Backend:** Express with TypeScript: Express combined with TypeScript ensures a robust and well-structured server-side codebase, allowing for effective request handling, and easier maintenance, contributing to a reliable backend architecture.
  - **Database:** MongoDB: MongoDB supports efficient storage and retrieval of user and event data, providing scalability and flexibility.
-
